

# The AI-Enabled Organization

Over the last two years, we have seen massive investments in artificial intelligence as companies strive to unlock unprecedented opportunities for innovation and productivity growth, hoping to create new sources of competitive advantage.

On their way to this “Digital Transformation 2.0” fundamental questions emerge: How to align AI strategies with business goals for long-term value creation? How to build a culture and infrastructure that supports AI adoption at scale? How to transition from AI pilots to measurable enterprise impact? How to manage the ethical and operational risks associated with AI? And many more.

Hosted by CFFO Chairman [Roland Deiser](#), an outstanding panel of thought and practice leaders explores these questions in an unstructured fireside chat. They are:

- [Tom Davenport](#) | Distinguished Professor of IT and Management | Babson College (the “A”)
- [Eve Psalti](#) | Senior Director of Azure AI Engineering| Microsoft (the “B”)
- [Carsten Linz](#) | CEO Bluegain; Author of *Radical Business Model Transformation* (the “C”)

This event is connected to the current edition of [Developing Leaders Quarterly \(DLQ\)](#) which focuses on **Augmented Intelligence**. Two participants on this Round Table have contributed as authors to this issue. Read their contributions here:

- **Tom Davenport:** [AI and Human Jobs](#)
- **Eve Psalti:** [Embracing AI in the Workplace](#)
